# The health of a world on the move

The Lancet Commissions

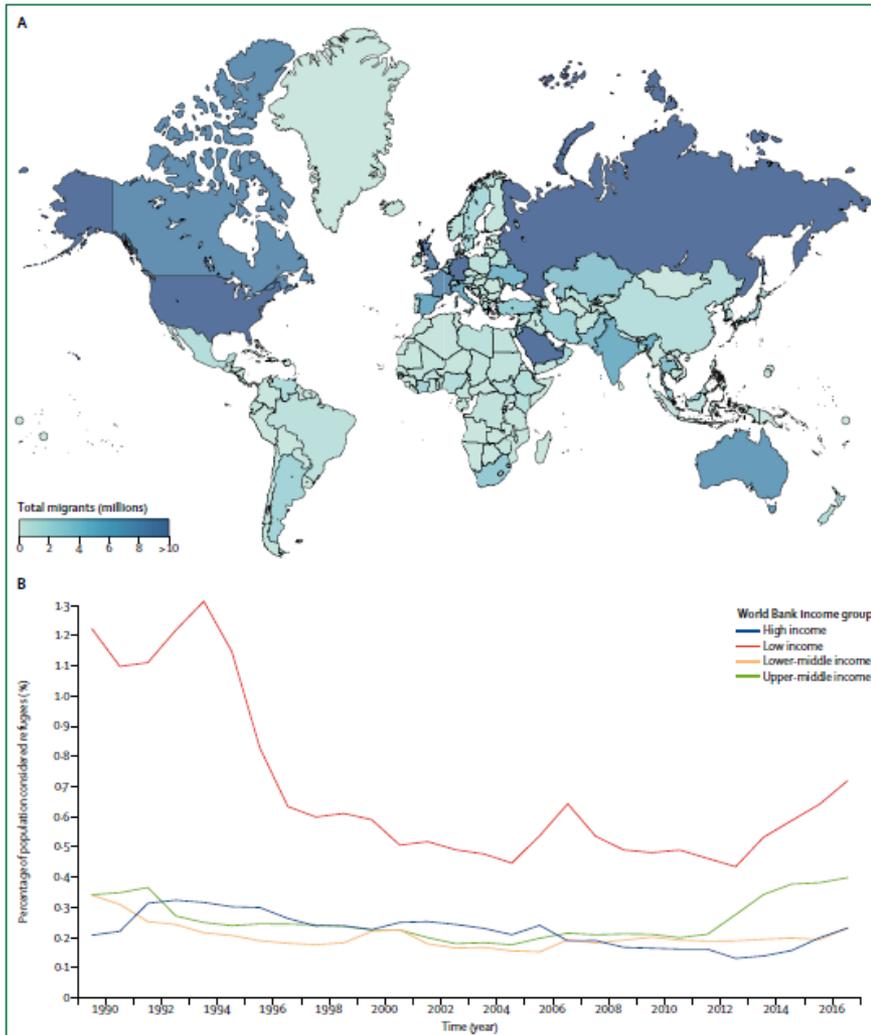

Figure 2: International migration globally\*  
(A) Global map of the total number of international migrants in 2015. (B) Percentage of population that were refugees by the World Bank Income group (1960-2017). Analysis done with data from the World Bank. Interactive online version available.\*

## The UCL-Lancet Commission on Migration and Health: the health of a world on the move

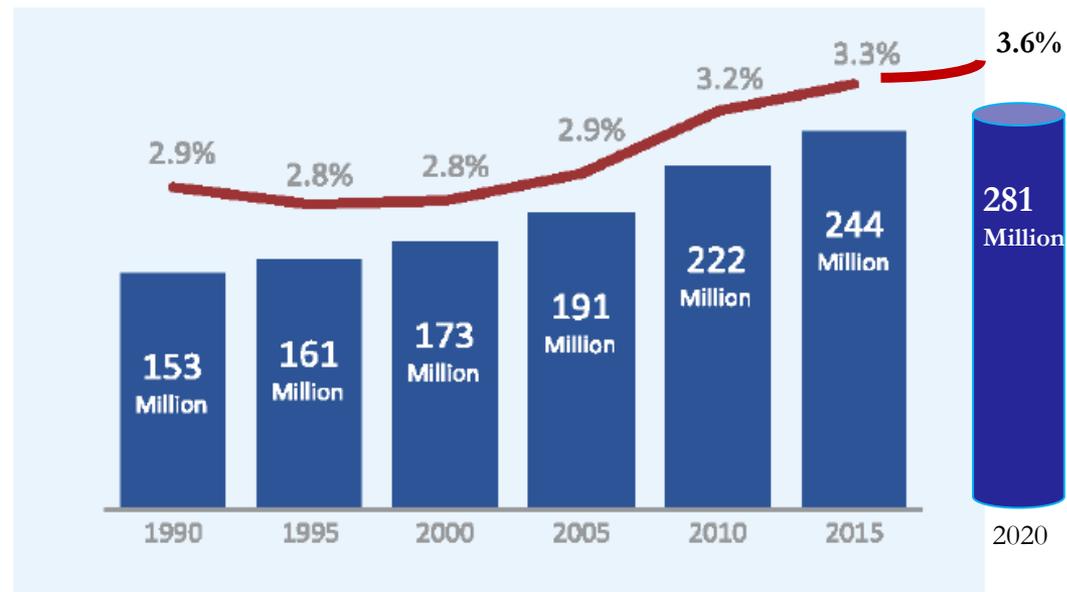

Ibrahim Abubakar\*, Robert W Aldridge\*, Delan Devakumar\*, Miriam Oratt\*, Rachel Burns, Mauricio L Barreto, Poonam Dhavan, Fouad M Fouad, Nora Groce, Yan Guo, Sally Hargreaves, Michael Knipper, Jaime Miranda, Nyovani Madise, Bernadette Kumar, Davide Moscat, Terry McGovern, Leonard Rubenstein, Peter Sammonds, Susan M Sawyer, Kabir Sheikh, Stephen Talman, Paul Spiegel, Cathy Zimmerman\*, on behalf of the UCL-Lancet Commission on Migration and Health†

- “With one billion people on the move or having moved in 2018, migration is a global reality”
- “Although estimates indicate that the majority of global migration occurs within low-income and middle-income countries (LMICs), the most prominent dialogue focuses almost exclusively on migration from LMICs to high-income countries (HICs)”
- **258 million international migrants (2017, IOM)**
- **740 million internal migrants (2009, UNDP)**

**NEARLY ONE –SEVENTH OF THE WORLD’S POPULATION IS NOW LIVING IN A LOCATION DIFFERENT FROM THE ONE IN WHICH THEY WERE BORN**

### SNAPSHOT OF INTERNATIONAL MIGRANTS

The international migrant population globally has increased in size but remained relatively stable as a proportion of the world's population.

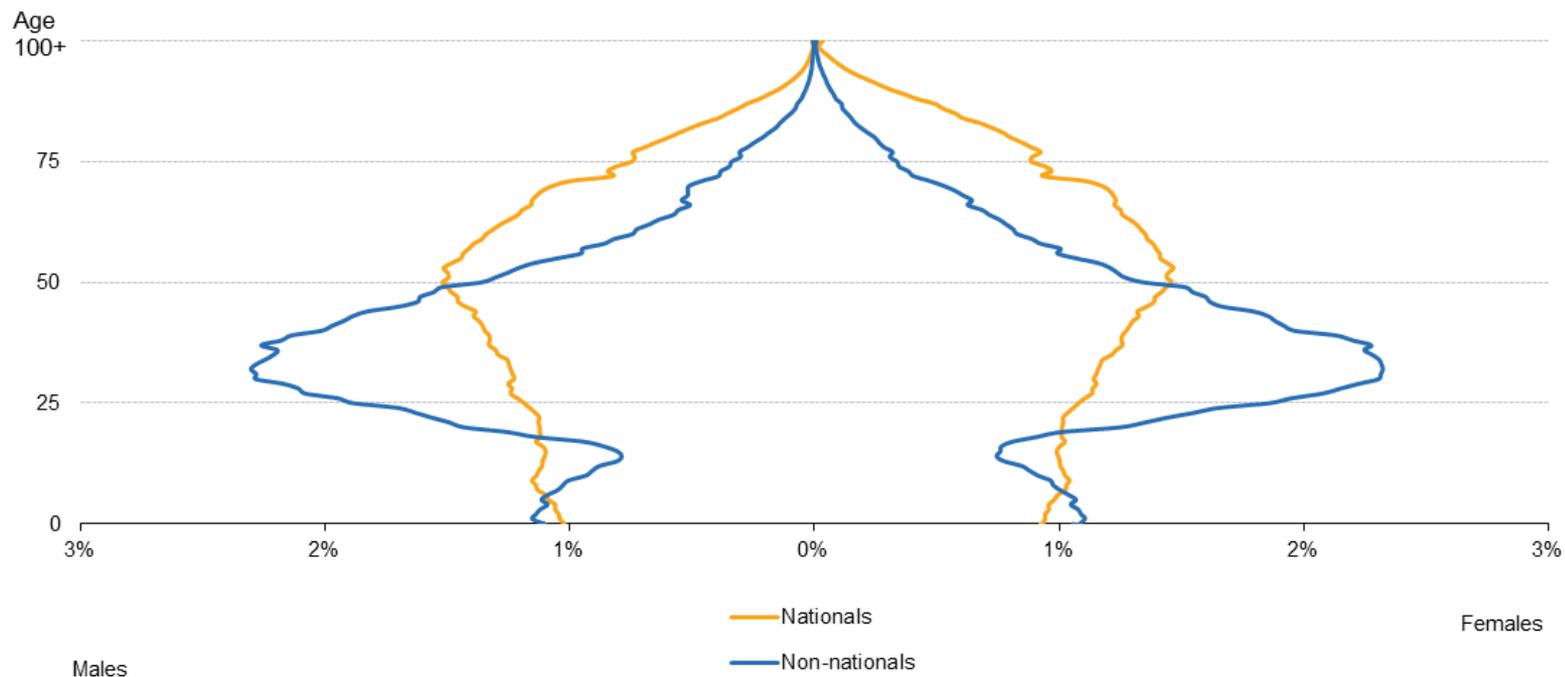

# What causes the migration phenomenon?

- ✓ Pushing factors in individuals - personal biography; pulling factors into the social context of the countries of arrival (first of all the aging structure of western countries' populations)
  - Demographic need
  - Climate change
  - Economic inequality
  - War and political persecution

## Age structure of the national and non-national populations, EU-28, 1 January 2018

(%)

# Are migrants a burden on services?

- ✓ «Nowadays, rather than burdening systems, migrants in HICs are more likely to bolster services by providing medical care, teaching children, caring for older people, and supporting understaffed services.»
  - Abubakar et al., The UCL –Lancet commission on migration and health, 2018

## L'immigrazione in Emilia-Romagna:

- ✓ L'Italia ha vissuto un aumento dell'immigrazione dagli anni '70, con un picco negli anni 2000.
- ✓ La crisi economica del 2008 e la pandemia del 2020 hanno causato una diminuzione dell'immigrazione.
- ✓ L'Emilia-Romagna è la regione italiana con la più alta percentuale di stranieri residenti (12%).
- ✓ I migranti in Emilia-Romagna rappresentano il 40% della popolazione under 40.

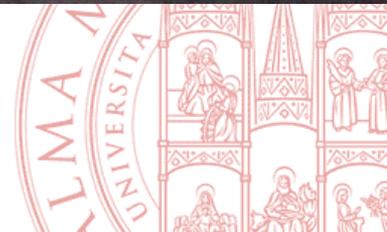

# The transcultural (vs ethnic) characteristics of migrants: the migration history

1. Migration project
2. Culture
3. Migration process
4. Adaptation to new society

*The boat people, Siracusa 08-08-2004*

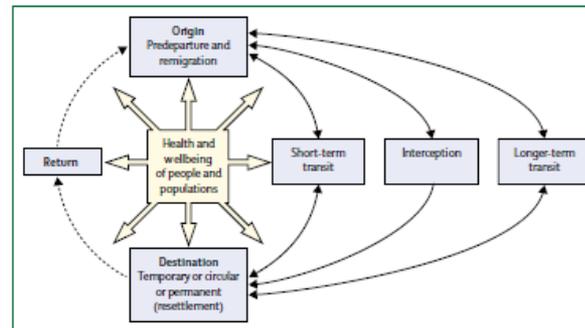

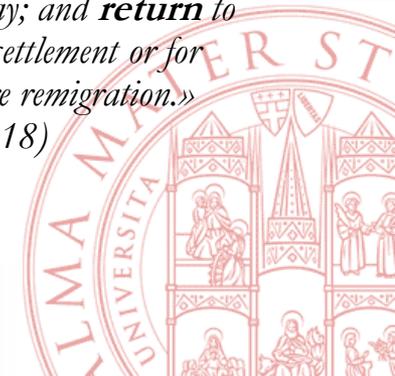

Figure 1: The migration cycle

## Health throughout the migration process

«Migration trajectories involve various phases including **pre-departure circumstances** at places of origin, **short-term or long term transit**, which might involve interception by authorities, non-governmental groups, or criminal gangs; **destination situation** of long term or short term stay; and **return** to places of origin for resettlement or for temporary visits before remigration.»  
(Abubakar et al, 2018)

## Women and children

“Women and children are especially at risk when they migrate without the protection of family or social networks. Unaccompanied girls and boys who move in ways that are not readily detected by potential support mechanisms are particularly vulnerable to neglect, trafficking, abuse, and sexual exploitation. Examples include unaccompanied and separated children who resort to sex work to survive and shelter in parks and makeshift camps in Greece.» (Abubakar et al., 2018)

## Migration and psychosis: a meta-analysis of incidence studies

Jean-Paul Selten<sup>1,2</sup>, Els van der Ven<sup>1,2</sup> and Fabian Termorshuizen<sup>2</sup>

<sup>1</sup>School for Mental Health and Neuroscience, University of Maastricht, Maastricht, The Netherlands and

<sup>2</sup>GGZ Rivierduinen, Institute for Mental Health, Leiden, The Netherlands

### Abstract

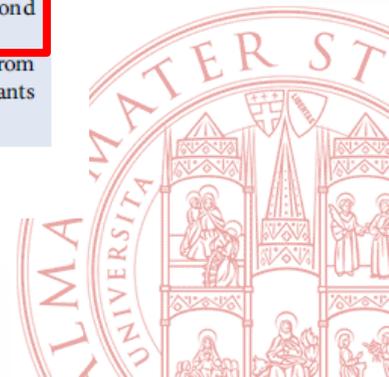

**Background.** The aims of this meta-analysis are (i) to estimate the pooled relative risk (RR) of developing non-affective psychotic disorder (NAPD) and affective psychotic disorder (APD) among migrants and their children; (ii) to adjust these results for socioeconomic status (SES); (iii) to examine the sources of heterogeneity that underlie the risk of NAPD.

**Methods.** We included population-based incidence studies that reported an age-adjusted RR with 95% confidence interval (CI) published 1 January 1977–12 October 2017 and used a random-effects model.

**Results.** We retrieved studies performed in Europe ( $n = 43$ ), Israel ( $n = 3$ ), Canada ( $n = 2$ ) and Australia ( $n = 1$ ). The meta-analysis yielded a RR, adjusted for age and sex, of 2.13 (95% CI 1.99–2.27) for NAPD and 2.94 (95% CI 2.28–3.79) for APD. The RRs diminished, but persisted after adjustment for SES. With reference to NAPD: a personal or parental history of migration to Europe from countries outside Europe was associated with a higher RR (RR = 2.94, 95% CI 2.63–3.29) than migration within Europe (RR = 1.88, 95% CI 1.62–2.18). The corresponding RR was lower in Israel (RR = 1.22; 0.99–1.50) and Canada (RR = 1.21; 0.85–1.74). The RR was highest among individuals with a black skin colour (RR = 4.19, 95% CI 3.42–5.14). The evidence of a difference in risk between first and second generation was insufficient.

**Conclusions.** Positive selection may explain the low risk in Canada, while the change from exclusion to inclusion may do the same in Israel. Given the high risks among migrants from developing countries in Europe, social exclusion may have a pathogenic role.

- Most studies in EU
- RR NAPD 2.13, RR APD 2.94
- The RRs diminished but persist after adjustment for SES
- Extra EU, Black at higher risk (no first vs second generations)

### Abstract

**Background.** Psychosis rates are higher among some migrant groups. We hypothesized that psychosis in migrants is associated with cumulative social disadvantage during different phases of migration.

**Methods.** We used data from the European Network of National Schizophrenia Networks study.

**Table 3.** Unadjusted and adjusted odds ratios for first-episode psychosis

	OR	OR <sup>A</sup>	OR <sup>B</sup>
Pre-migration disadvantages	<b>1.61 (1.19–2.17) (<math>p = 0.002</math>)</b>	1.55 (0.99–2.41) ( $p = 0.051$ )	<b>1.61 (1.06–2.44) (<math>p = 0.027</math>)</b>
Migration adversities	<b>1.78 (1.31–2.41) (<math>p &lt; 0.001</math>)</b>	<b>1.53 (1.05–2.25) (<math>p = 0.028</math>)</b>	1.18 (0.672–2.06) ( $p = 0.568$ )
Post-migration disadvantages	<b>1.94 (1.19–3.15) (<math>p = 0.008</math>)</b>	<b>2.06 (1.13–3.73) (<math>p = 0.018</math>)</b>	<b>1.89 (1.02–3.51) (<math>p = 0.044</math>)</b>
Expectations/achievements mismatch	<b>1.61 (1.38–1.87) (<math>p &lt; 0.001</math>)</b>	<b>1.81 (1.07–1.29) (<math>p = 0.001</math>)</b>	<b>1.14 (1.03–1.26) (<math>p = 0.014</math>)</b>

OR = unadjusted.

OR<sup>A</sup> = adjusted for site, age, gender, ethnicity, education, family history of psychosis, childhood trauma, cannabis use, language fluency, years after migration.

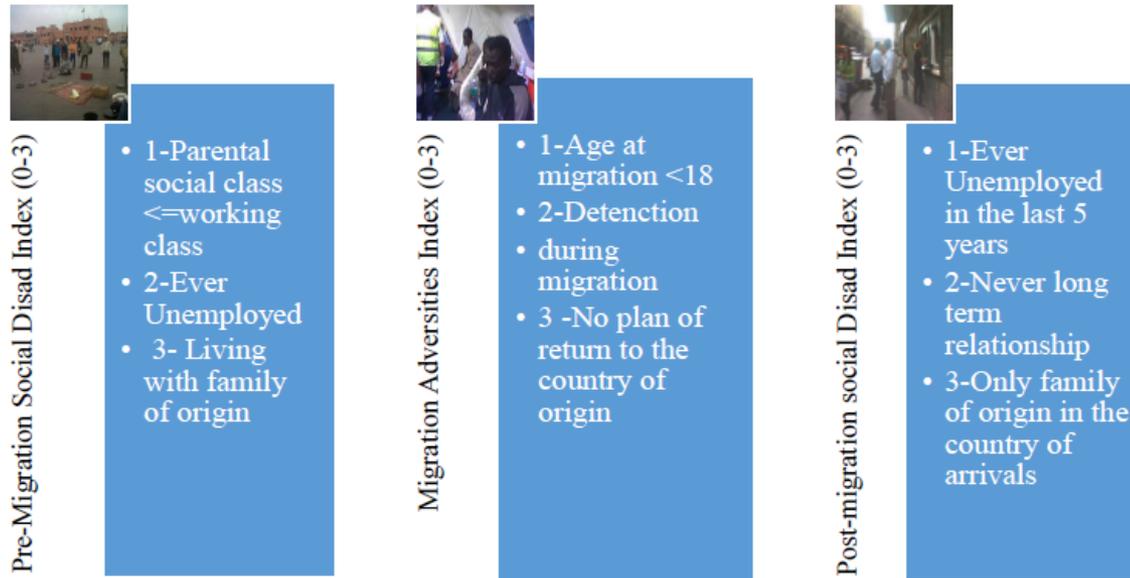

OR<sup>B</sup> = adjusted for all above variables plus pre-migration and post-migration disadvantages, migration adversities and expectations/achievements mismatch.

ORs in **bold** are significant ( $p < 0.05$ ).

# Migration Social disadvantages and adversities index

### Abstract

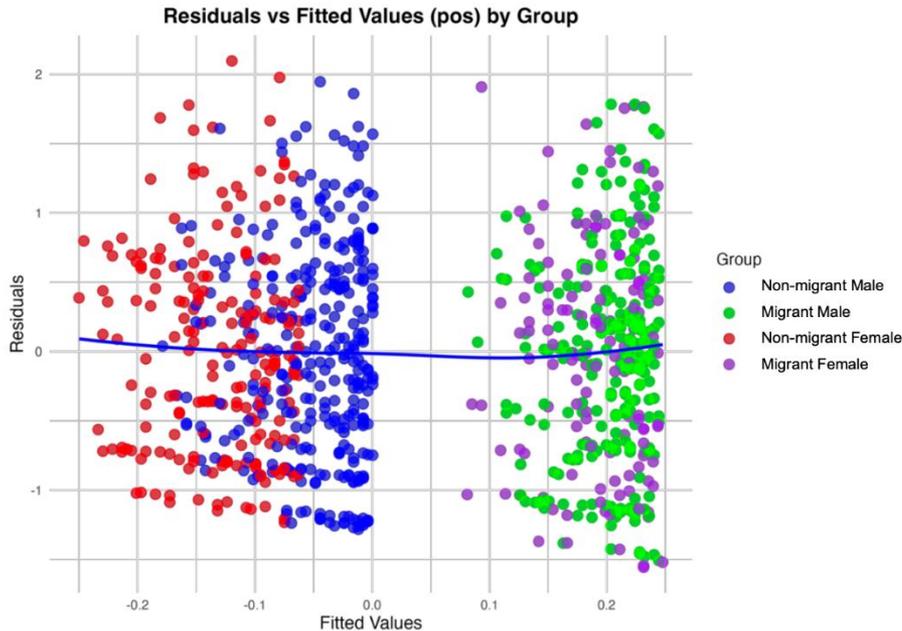

**Background.** Child maltreatment (CM) and migrant status are independently associated with psychosis. We examined prevalence of CM by migrant status and tested whether migrant status moderated the association between CM and first-episode psychosis (FEP). We further explored whether differences in CM exposure contributed to variations in the incidence rates of FEP by migrant status.

**Methods.** We included FEP patients aged 18–64 years in 14 European sites and recruited controls representative of the local populations. Migrant status was operationalized according to generation (first/further) and region of origin (Western/non-Western countries). The reference population was composed by individuals of host country's ethnicity. CM was assessed with Childhood Trauma Questionnaire. Prevalence ratios of CM were estimated using Poisson regression. We examined the moderation effect of migrant status on the odds of FEP by CM fitting adjusted logistic regressions with interaction terms. Finally, we calculated the population attributable fractions (PAFs) for CM by migrant status.

**Results.** We examined 849 FEP cases and 1142 controls. CM prevalence was higher among migrants, their descendants and migrants of non-Western heritage. Migrant status, classified by generation (likelihood test ratio:  $\chi^2 = 11.3$ ,  $p = 0.004$ ) or by region of origin (likelihood test ratio:  $\chi^2 = 11.4$ ,  $p = 0.003$ ), attenuated the association between CM and FEP. PAFs for CM were higher among all migrant groups compared with the reference populations.

**Conclusions.** The higher exposure to CM, despite a smaller effect on the odds of FEP, accounted for a greater proportion of incident FEP cases among migrants. Policies aimed at reducing CM should consider the increased vulnerability of specific subpopulations.

Migration is a major risk factor for schizophrenia but the neurochemical processes involved are unknown. One candidate mechanism is through elevations in striatal dopamine synthesis and release. The objective of this research was to determine whether striatal dopamine function is elevated in immigrants compared to nonimmigrants and the relationship with psychosis. Two complementary case-control studies of in vivo dopamine function (stress-induced dopamine release and dopamine synthesis capacity) in immigrants compared to nonimmigrants were performed in Canada and the United Kingdom. The Canadian dopamine release study included 25 immigrant and 31 nonmigrant Canadians. These groups included 23 clinical high risk (CHR) subjects, 9 antipsychotic naïve patients with schizophrenia, and 24 healthy volunteers. The UK dopamine synthesis study included 32 immigrants and 44 nonimmigrant British. These groups included 50 CHR subjects and 26 healthy volunteers. Both striatal stress-induced dopamine release and dopamine synthesis capacity were significantly elevated in immigrants compared to nonimmigrants, independent of clinical status. These data provide the first evidence that the effect of migration on the risk of developing psychosis may be mediated by an elevation in brain dopamine function.

# Migration and Psychosis: what the evidence tells us

- ✓ High rates of first episode psychosis (FEP) in migrants and ethnic minorities (Shen et al, 1998; Fossion et al, 2002; Carta et al, 2002; Dembling et al, 2002; Cantor-Graae et al, 2003; Cantor-Graae & Selten, 2005; Selten et al., 2019)
  - Studies had mostly been conducted in the UK and northern Europe.
  - Despite huge variations of psychosis IR , IRR (migrants IR/natives IR) is quite similar among places
- ✓ Risk persists in second generations migrants (Selten et al. 2019) and higher risk found also in internal migrants (Tarricone et al., 2016)
- ✓ Evidence of cumulative effect of social adversities and disadvantages during migration history (Tarricone et al., 2021), childhood maltreatment (D'andrea et al. 2022), and elevated stress induced dopamine release in migrants ( Egerton et al., 2017)

Is it time to think about history of migration and psychosocial intervention in countries of arrivals

Pertanto si raccomanda

### **Raccomandazione 90 di Livello A**

- Prestare attenzione alla **narrazione della storia migratoria e personale**, raccogliendo informazioni relative a difficoltà dell'adattamento prima, durante e dopo la migrazione e alla esposizione al **trauma**, in considerazione della più elevata frequenza di PTSD nella popolazione migrante; si possono utilizzare a tale scopo interviste quali la "Bologna Migration history and social integration interview", già implementata nel progetto europeo EU-Gei e disponibile in italiano (Tarricone et al., 2022). La consultazione dei documenti citati è disponibile sul sito <https://centri.unibo.it/bo-tpt/it/innovazione/servizi-per-enti-e-imprese>
- Assicurare adeguata **mediazione linguistica e culturale** in tutte le fasi della cura, da quella di valutazione a quella di implementazione degli interventi sopra descritti per la popolazione generale;
- Rafforzare la **presa in carico sociale**, mediante il coinvolgimento, accanto al case-manager di area sanitaria, dell'operatore sociale;
- Implementare gruppi di auto-mutuo aiuto per gestire lo stress ed i fattori di rischio

- ✓ Il fenomeno migratorio e l'approccio transculturale
- ✓ Le evidenze relative a un eccesso di psicosi nei migranti e i loro bisogni specifici
- ✓ **Gli interventi utili e la competenza culturale**

# Cittadini stranieri «irregolari» in Italia:

- Hanno diritto alle cure ambulatoriali ed ospedaliere urgenti o comunque essenziali, anche se continuative.
- Possono accedere ai programmi di medicina preventiva.
- L'accesso alle cure non comporta alcuna segnalazione alle autorità.

Legge italiana:

- Garantisce il diritto alla salute per tutti, indipendentemente dalla regolarità del soggiorno.
- Promuove la salute individuale e collettiva.

Fonte:

- Circolare del Ministero della Salute del 24 marzo 2000, n. 5

# La competenza culturale

## **Il problema:**

Le persone con psicosi che provengono da contesti culturali diversi possono avere difficoltà ad accedere e aderire ai programmi di trattamento.

## **La soluzione:**

Rafforzare la "cultural competence" nei servizi di salute mentale e nei programmi di trattamento delle psicosi.

## **Obiettivi:**

- Rendere il sistema di cure visibile e accessibile a tutti.
- Rafforzare l'aderenza al programma di cura.

## **Come fare:**

- Mediazione linguistica e culturale:
  - Il mediatore linguistico aiuta il clinico a comprendere meglio il paziente e la sua cultura.
  - Il mediatore aiuta il paziente a comprendere il sistema di cure e il programma di trattamento.
- Coinvolgimento dell'operatore sociale:
  - L'operatore sociale facilita i rapporti con le associazioni cittadine.
  - L'operatore sociale favorisce l'integrazione sociale del paziente.

## **Benefici:**

- Migliore comunicazione tra paziente e clinico.
- Maggiore fiducia nel sistema di cure.
- Aumento dell'aderenza al programma di cura.
- Migliore outcome del trattamento.

## **Fonti:**

The online version of this article can be found at:  
<http://isp.sagepub.com/content/early/2010/09/16/0020764010382368>

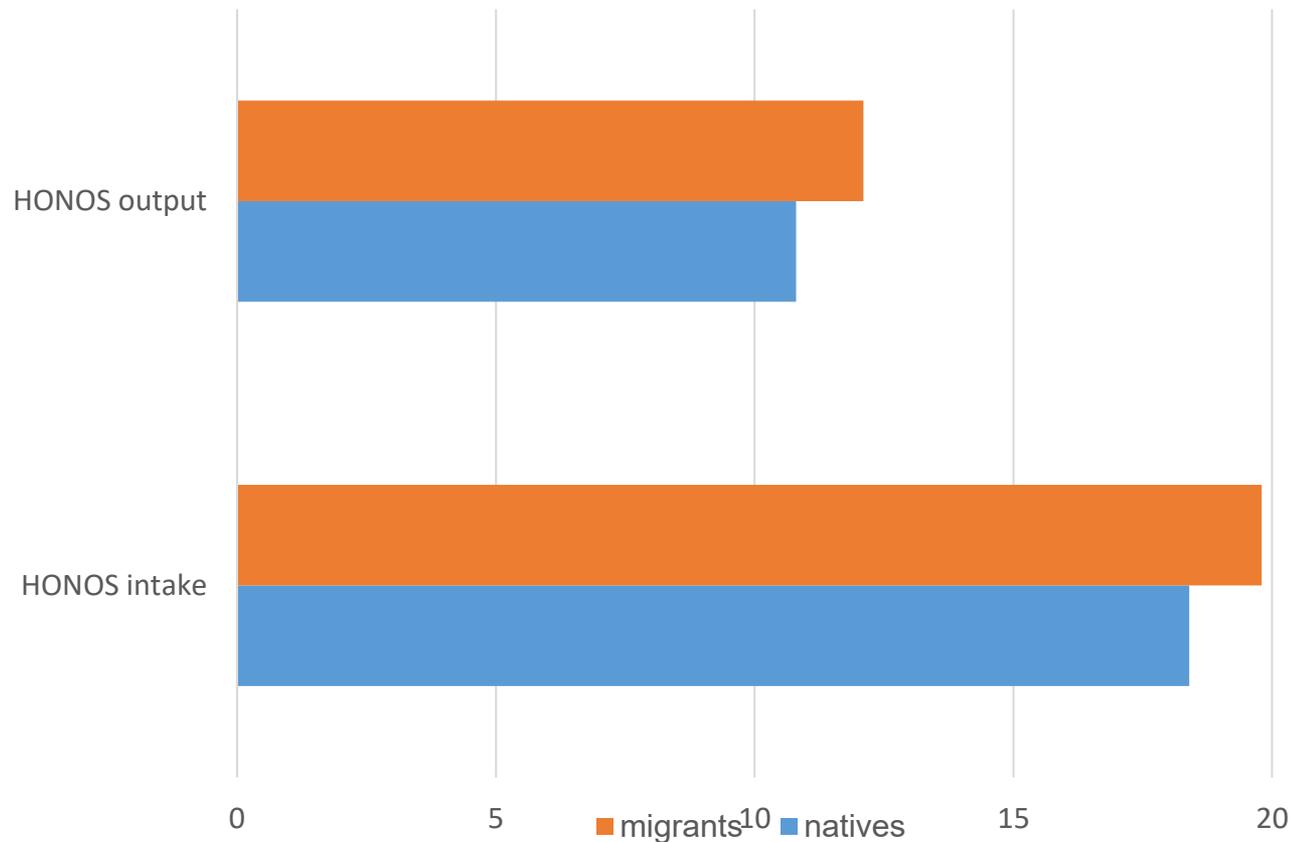

**Table 1.** Sociodemographic and clinical variables related to drop out at six-month follow-up

	$\chi^2$	p	OR (95% CI)
<b>Sociodemographic variables</b>			
Younger than 26 years old	4.4	0.04	2.4 (1.0–5.3)
Asian origin	8.1	0.004	0.1 (0.01–0.7)
Having lived in Italy for a period shorter than five years	8.6	0.004	3.4 (1.5–7.9)
<b>Clinical variables</b>			
Being affected by mood disorders	4.5	0.04	0.3 (0.08–0.97)
Receiving social intervention	5.2	0.02	0.7 (0.71–0.85)
Receiving cultural mediator-intervention	2.2	0.1	0.3 (0.07–1.49)

# Storia migratoria e scala HONOS (877 cittadini italiani , 208 cittadini stranieri, dati RER programma primi episodi psicotici )

# Variabili esplicative cliniche

- ✓ Numero di **ricoveri**,
- ✓ Numero totale di interventi ricevuti,
- ✓ numero di **interventi diretti (DI)** (cioè gli interventi che implicano interventi diretti e significative tra i partecipanti e gli operatori – medici, infermieri, assistenti sociali, altri utenti – partecipanti),
- ✓ Numero di **interventi specifici (SI)** (cioè gli interventi specifici per FEP come la psicoeducazione e la CBT, (RER-FEP recommendations, 2024)
- ✓ Numero di **interventi Indiretti (II)** (cioè che non coinvolgono gli utenti direttamente, come le supervisioni dei casi clinici)

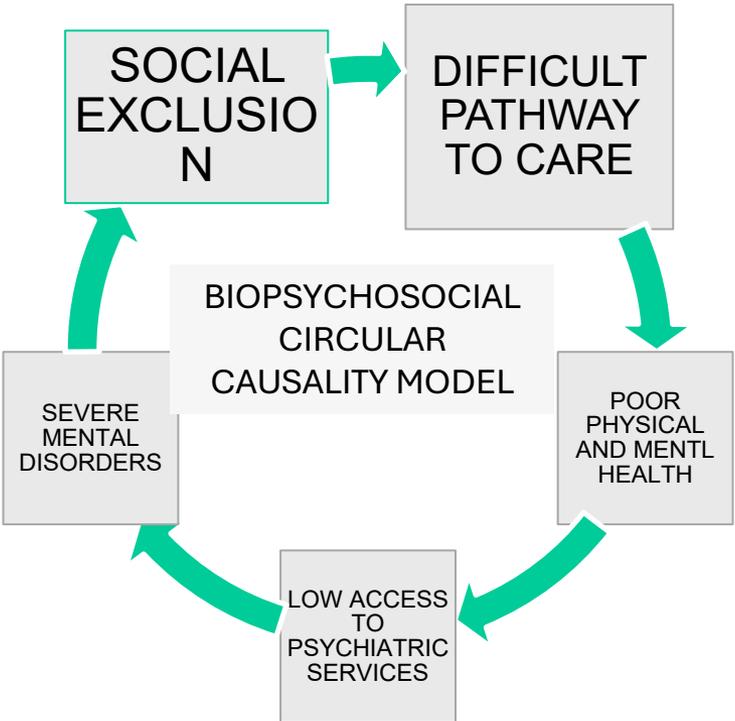

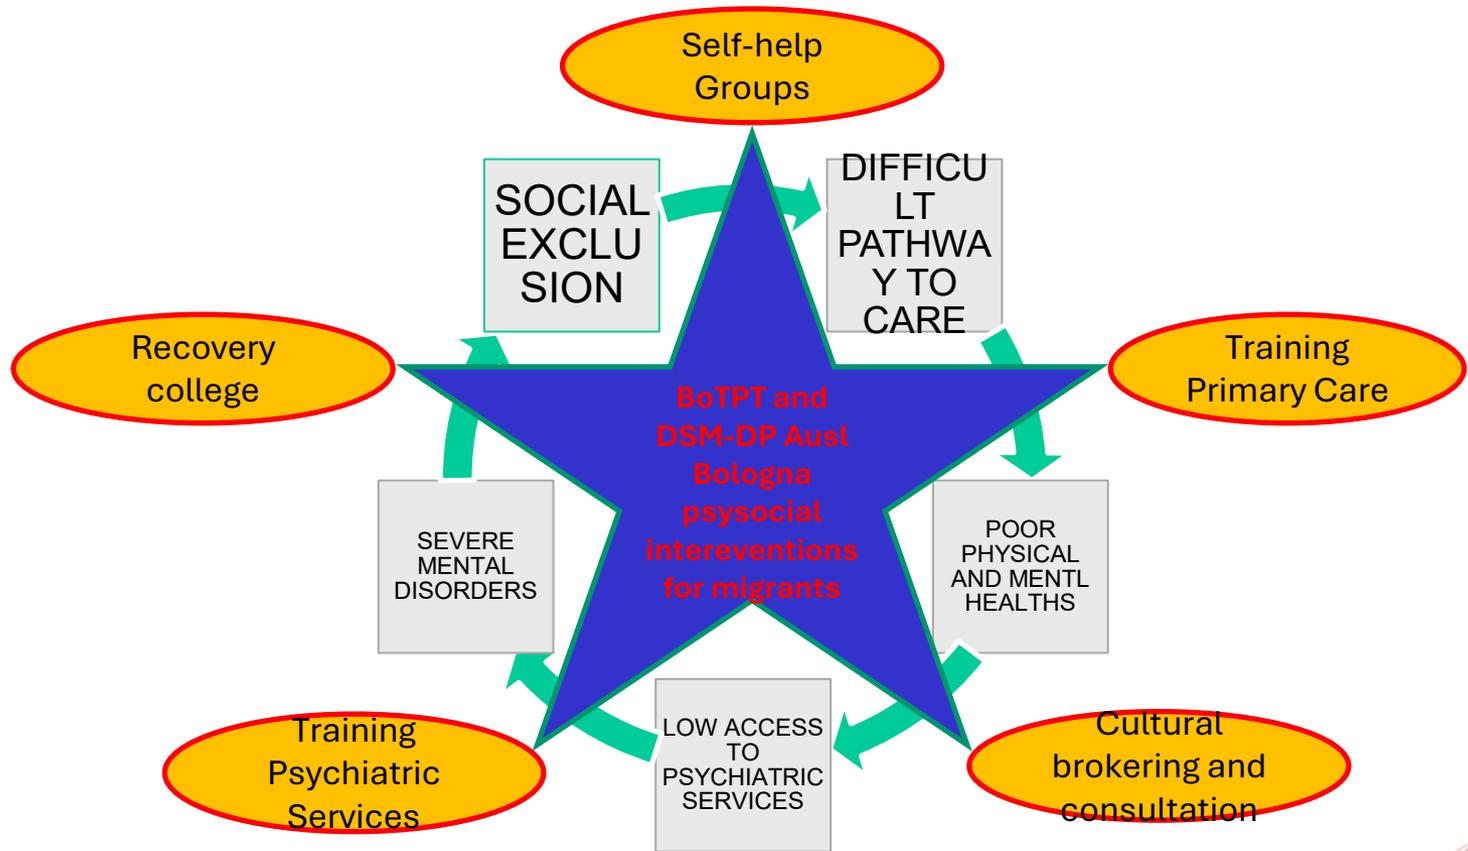

# Miglioramento significativo della Honos alla analisi multivariata

✓ **DUP < 9 mesi ( $p = 0.003$ ), uso di sostanze all'intake ( $p=0.01$ ) e numero di interventi specifici maggiore della media di 36 ( $p = 0.005$ ) sono gli unici fattori che restano predittori indipendenti di miglioramento Honos (**recovery**) nella analisi multivariata.**

# Biopsychosocial circular causality model

Pertanto si raccomanda

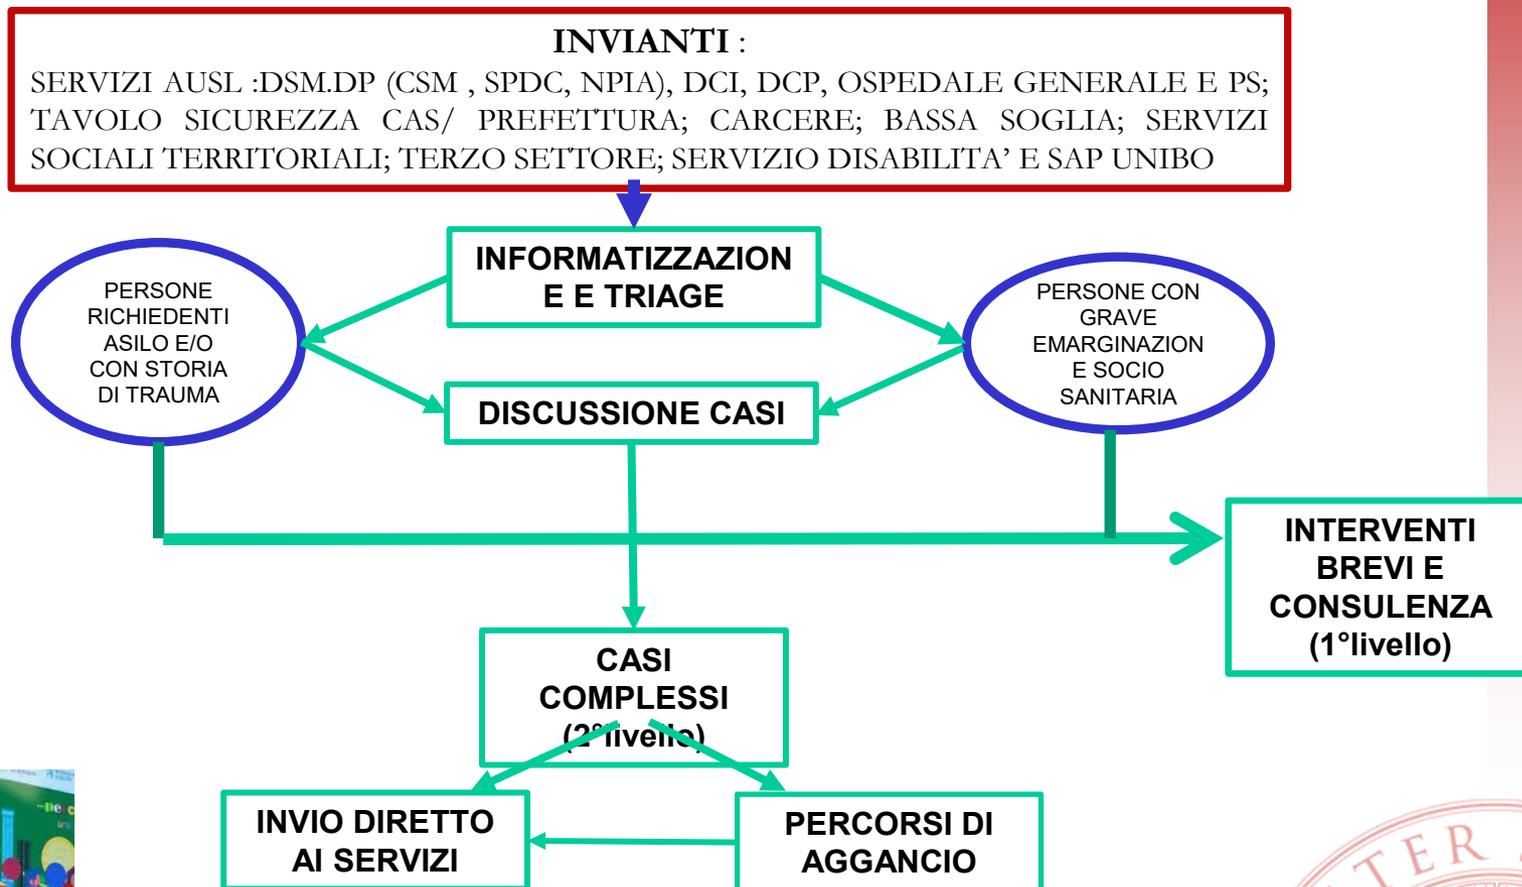

**Raccomandazione 91 a cura del GLR** - Prevedere nelle equipe di cura nei servizi di salute mentale dedicati ai programmi di trattamento delle psicosi le figure del mediatore culturale e dell'operatore sociale.

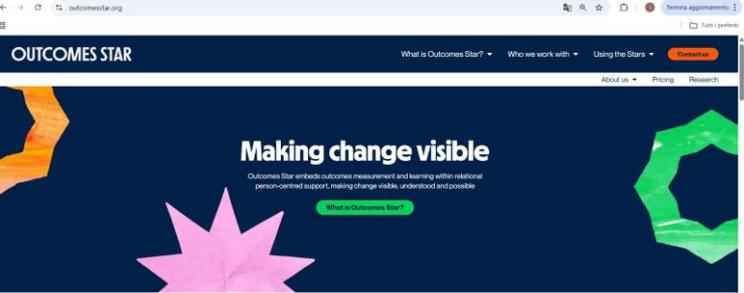

Inoltre il Gruppo Regionale raccomanda

**Raccomandazione 92 a cura del GLR** - Prevedere nei servizi di salute mentale dedicati ai programmi di trattamento delle psicosi progetti a "bassa-soglia", che prevedono un coordinamento sovra-territoriale della presa in carico dei migranti privi di residenza o stabile domicilio, in stretta collaborazione con i servizi sociali del Comune, per facilitarne l'erogazione e la continuità delle cure.

# Organizzazione del lavoro della U. Centro Casa dell'Area Vulnerabili e Migranti del DSM-DP Ausl Bo

The Journey of Change has no shortcuts

## How does the Integration Star work?

The Integration Star covers eight key outcome areas to help refugees who need support to integrate into their new country and to build a life there. It assesses their progress towards each outcome area following a five-stage Journey of Change.

You and the people you support will fill out the Star together, and use it to better identify where their strengths lie and where they might need more help, and to make plans for moving forward along the journey.

## Centro di Medicina Transculturale e Psicosomatica di Bologna

Il Centro di Medicina Transculturale e Psicosomatica di Bologna (Bologna Transcultural Psychosomatic Team - BoTPT) svolge attività di ricerca e formazione nell'ambito della medicina psicosomatica, in particolare per la cura e la prevenzione dei disturbi mentali nei migranti. L'attenzione alla dimensione di "salute" non solo individuale, a partire da quella rintracciabile nella storia di ogni persona, ma anche pubblica, insita nella società e intimamente collegata all'ambiente, fanno di questo centro un riferimento nel panorama nazionale e internazionale per la continua acquisizione di conoscenze e di strumenti di dialogo tra la medicina, le scienze sociali e gli studi umanistici.
